2016+ Kawasaki Teryx/Teryx 4

## One-piece Polycarbonate Windshield Kit Installation

HARDWARE	DESCRIPTION	QUANTITY
	10" VELCRO STRAPS	2
	2" LOOP CLAMP PLUS (4) 6" ADHESIVE HOOK STRIPS	4
	WINGNUT	4
	1 1/2" BOLT	4
	NEOPRENE WASHER	4
	SMALL WASHER	4
	LOCK NUT	4

**Do not remove protective paper!**

STEP 1: Set windshield on hoodline.

STEP 2: Wrap loop clamp around roll bar in the vicinity of the clamp holes precut in your windshield.

STEP 3: Assemble bolt, neoprene washer and wingnut.

STEP 4: Peel back protective paper enough to expose the clamp holes. Insert wingnut/bolt/washer assembly in through the front of the windshield, through the hole in the clamp, secure on the inside of the windshield with small washer and lock nut.

STEP 5: Repeat steps for all remaining hardware. **Hand tighten only at this time.**

STEP 6: Insert straps through the top slots precut in your windshield. Straps go in through the front with the fuzzy Velcro facing the inside of the UTV, wrap strap around bar through the plastic clip and attach rough Velcro to fuzzy.

STEP 7: Tighten all hardware, do not flatten the neoprene washer. If the neoprene washer is mashed flat please loosen the lock nut a smidge.

**Remove protective paper from both sides of the windshield!**

**Do not wipe your polycarbonate windshield anything, including T-Shirt, bath towel or even micro fiber cloth!**

**All of these materials will scratch the windsheild.**

**We recommend you spray the windshield with a water hose to loosen up dirt and mud. Spray with water hose until all dirt and mud and whatever is gone from the windshield.**

**Once the windshield is free of bits and pieces of dirt then you may use micro fleece only to buff the out streaks left over from the water, or use MUDD Traxxs Ceramic Detailer to shine up the windshield.**

**Micro fleece can be found at walmart, it is super soft material mostly used to make blankets. I am not talking about regular fleece! Micro Fleece only please. Even with a micro fleece blanket you may still leave tiny scratches so wipe windshield gently please. Not sure about the fabric please call 859-488-7447 ask for Sam.**

**Do not use windex! Or any other chemical to clean the windshield. You may use wax but before you do, test a small portion of the windshield just in case.**

**I will repeat the only thing I ever use to clean the windshields are MUDD Traxx Ceramic Detailer and dawn dish soap! Squirt dish soap on windsheild then spray off with water hose. One more time for those in the back do not wipe the windsheild!**
